

## Pacifica Honolulu

The building is situated on a 2.3-acre site with a residential tower along the Kapiolani corridor. Pacifica represents prime urban living that is located near every place residents want to be, with convenient access to everything they love to do.

### Project:

Pacifica Honolulu is a residential and retail development in Honolulu Hawaii.

### Scope:

A building with a residential interior area of 430,000 square feet and 489 residential apartments.

### Requirement:

An underlayment system specially designed for use under tile and stone floors that will increase the Impact Insulation Class (IIC) over the existing floor ceiling assembly.

### Solution:

HardFloor acoustical underlayment. HardFloor is a lightweight 5 mm thick underlayment system offering high energy impact with low weight and will remain unchanged after repeated impact loads. HardFloor, a synthetic cork underlayment will not rot, swell, absorb water and is anti microbial.

Acoustical Floor Underlayments

Industrial Noise / OSHA Standard Acoustics Quality Acoustical Products / Ceilings

## Pacifica Honolulu

Pacifica Honolulu is a 46-floor building with 41 residential floors and 5 parking floors. Pacifica was planned with one intention in mind; to create an architecturally innovative and beautifully designed structure that provides intimate and private living space perfect for family and friends. When Global Stone Inc., a company located in Vineyard Utah, needed an acoustic underlayment to install under 18 x 18 porcelain tile, they chose HardFloor.

Rob Hiatt, Senior Project Manager of Global Stone in UT, says this about HardFloor

*"Global Stone Inc. has used a variety of sound controls and crack isolators over the years on many projects. We used HardFloor for the first time on our Pacifica Jobsite in Honolulu, HI. We were very pleased with how easy it was to install. It is lightweight and since it comes in the 4' X 4' squares we did not have to fight curling edges. A quality product from a quality company. We would recommend this multipurpose underlayment for future installs."*

*Rob Hiatt, Senior Project Manager, Global Stone*
